ABSTRACT OF THE DISCLOSURE

A main computer with multiple operating devices enables multiple users to manipulate the main computer. The main computer has interactive teaching software and multiple teaching slides, so that the interactive teaching software is executed to achieve the following:

displaying one teaching slide, wherein the teaching slide has multiple buttons;

allowing at least one operating device to manipulate the process of displaying teaching slides so that the operating device can choose buttons from the displayed teaching slide, wherein the manner of allowing at least one operating device to manipulate the process of displaying teaching slides includes choosing one operating device from multiple operating devices;

accepting a choice made by an operating device; and

displaying another teaching slide after the choice has been made.
